# Modifying VPN Profile to Connect Via UDP versus TCP

Disconnect your VPN session before performing the steps in this procedure.

If not already open, open your Cisco Systems VPN Client. The StateOfIndiana profile should be highlighted. If it is not, highlight it and click Modify.

On the properties window, click the Transport tab.

On the Transport Tab, click the radio button next to IPSec over UDP (NAT / PAT) and then click Save.

Attempt to connect as normal.
